

16-19 JULY 2025
Sardinia, Italy

[Full immersion course with didactic
technical videos, live surgeries and
practical hands-on.]

UBGEN[®] INTENSIVE COURSE

**ON BONE REGENERATION
AND SOFT TISSUE MANAGEMENT
AROUND IMPLANTS**

Silvio Mario Meloni
(DDS, PhD, MS)

 **UBGEN**

UBGEN® INTENSIVE COURSE

This course is for intermediate, advanced implantologists and regenerative surgeons who wish to improve their treatments and to keep up with the advances in technology and equipment which have radically transformed this specialty.

TUTOR
SILVIO MARIO MELONI
(DDS, PHD, MS)

Silvio Mario Meloni graduated in DDS and subsequently obtained the PhD and the degree in Oral Surgery at the University of Sassari, respectively in 2008, 2003 and 2009. In 2012, he completed the gide / UCLA one-year clinical master's degree in dental implantology a Los Angeles, and was awarded 1st place Top Honors in Implant Dentistry. In 2013 he obtained the EAO Certificate in implant therapy conferred by the Board of the European Association for Osseointegration. He is currently a professor (RTDB) of Periodontology and Implantology at the University of Sassari, Italy. His main clinical focus and research is in the field of bone regeneration and guided surgery. He has published many scientific articles on major magazines.

METHOD AND ORGANIZATION

The course alternates theoretical sessions, which will expand attendees' knowledge of the subject, and live surgery hands-on sessions, which will test attendees' clinical expertise, under the supervision of Prof. Meloni.

SUBJECTS AND MODULE

Practical sessions include hands-on, and specific live surgeries with the objective to test the techniques covered in the theoretical sections and learning the new procedures manually. Attendees can immediately implement the techniques studied upon completing the course.

WHAT YOU WILL LEARN

Attending this course enables you to gain the following skills:

DAY 1

Diagnosis and Sinus Lift Augmentation

- Executing diagnostic procedures with the use of virtual tools.
- Identifying the most suitable treatment for each patient.
- **DECISION MAKING:**
Sinus lift preservation and limits.
When augmentation is inevitable.
- How to perform transcrestal sinus lift.
- How to perform lateral sinus lift.
- How to manage sinus lift complications.

DAY 2

Horizontal Guided Bone Regeneration + HANDS-ON

- Learning the biological and clinical principles of Guided Bone Regeneration.
- How to combine guided surgery and bone regeneration to achieve the best prosthetic and aesthetic results.
- When to perform a one stage or two stages GBR.
- How to harvest autologous bone from intra-oral sites.
- How to design and raise a flap in aesthetic and non-aesthetic areas.
- Deciding how much the flap should be raised.
- The choice of the membrane. Resorbable vs non-resorbable membranes.
- The sausage technique.
- How to fix the membranes.
- Vestibular flap passivation.
- Lingual flap passivation.
- How to suture properly.

HANDS-ON ON PIG JAW: Every phase will be discussed by Prof. Meloni in a high didactic and detailed way. Clinicians will be provided with a complete and enriching session of learning, where the techniques previously discussed will be demonstrated, practiced and mastered.

WHAT YOU WILL LEARN

Attending this course enables you to gain the following skills:

DAY 3 | Vertical Bone Augmentation

- Principle of vertical bone augmentation.
- Step by step explanation on how to achieve the desired vertical height.
- Advanced technique for flap management.
- Not resorbable membranes vs customized titanium grid.
- Vertical augmentation with resorbable material.
- Computer Guided Bone Regeneration and vertical bone augmentation.
- Vertical augmentation on posterior mandible.
- Complications: how to reduce their incidence and to manage them.

DAY 4 | LIVE SURGERY

During the live surgery session, participants will have the opportunity to observe surgical treatments being performed on patients in real-time.

Each step of the procedure will be thoroughly explained and commented on, allowing participants to see how theoretical knowledge and scientific principles are practically applied in a clinical setting.

This experience is designed to enhance understanding by directly correlating learned concepts with actual surgical practices.
